# Pagination

React pagination component consists of button-like styled links, that are arranged side by side in a horizontal list. Learn how to create nice looking pagination to navigate through pages easily.

## Usage

### Example

### Script

```
const [currentPage, setActivePage] = useState(2)

return (
  <div className={'mt-2'} >
    <CPagination
      activePage={currentPage}
      pages={10}
      onActivePageChange={(i) => setActivePage(i)}
    ></CPagination>
  </div>
)
```

## # Features

- Determine behavior, style and functionality of pagination
- Smart automatic items generation

## # Pagination API

Name	Required	Type	Default Value
className		string	
user classes for the main HTML tag			
innerRef		(object   Function   string)	

- Card
